the top layer format using a prototype online authoring tool tailored for the format. Participants will at the end of the session be asked to provide feedback on the novel format, specifically on relevance, comprehension, likability and feasibility of production. Feedback is collected using a multiple-choice survey with clickers in addition to a final discussion.

**265WS IMPROVING GUIDELINE IMPLEMENTABILITY WITH GUIDE-M (GUIDELINE IMPLEMENTABILITY FOR DECISION EXCELLENCE MODEL): AN INTERACTIVE WORKSHOP**

1. M Kastner, 2. I Makarski, 1. Hayden, 2. Durscher, 1A Chanette, 1O Bhattacharyya, 2M Brouwers. 1. Uo Shing Knowledge Institute of St. Michael’s Hospital, Toronto, Canada; 2. Department of Oncology, McMaster University, Hamilton, Canada

10:1136/bmjqs-2013-002293.27

**Background** We developed a framework of guideline uptake called GuIDE-M (Guideline Implementability for Decision Excellence Model) based on an extensive literature review. It describes four domains covering guideline content to optimise the implementability of recommendations [Stakeholder development, Evidence synthesis, Considered Judgement and Feasibility] and two domains related to communication of content [Language and Format].

**Objectives/Goal** (1) To learn about GuIDE-M, (2) To conduct an assessment of participants’ current use of the GuIDE-M domains in guideline development or assessment and (3) To determine priorities for tool development to operationalise GuIDE-M domains.

**Target Group, Suggested Audience** Guideline developers, guideline users and researchers. [5]

**Description of the Workshop and Methods used to Facilitate Interactions** (1) Introduction (15 minutes). A brief foundational overview of GuIDE-M. (2) Facilitated Assessment (60 minutes). Participants will break into small groups to discuss one or more of the domains in GuIDE-M. There they will (a) conduct a more detailed review of the domain, (b) assess the extent to which their guideline-related activities align with GuIDE-M principles, (c) reflect on the extent to which improving in the area is a priority, (d) discuss methods and available tools to operationalize the domain concepts, and (e) explore the types of tool(s) that should be developed to incorporate domain concepts into guideline development. Participants will be invited to remain involved as evaluators, pilot-testers and developers of these tools. The facilitated assessment will happen twice (2 x 30 minutes) to allow participants to focus on two of the GuIDE-M domains. (3) Wrap-Up (15 minutes).

**191WS SOFTWARE TOOLS AND ACTION STATEMENT PROFILES TO FACILITATE GUIDELINE DEVELOPMENT**

1. R Shiffman, 2. R Rosenfeld. 1. Yale University School of Medicine, New Haven, CT, USA; 2. American Academy of Otolaryngology - Head and Neck Surgery, Alexandria, VA, USA

10:1136/bmjqs-2013-002293.28

**Background** Despite the importance of guideline recommendations being “actionable”, many current guidelines fail to meet standards for clarity, transparency, and implementability. These deficiencies contribute to failure of guidelines to influence care.

**Objectives/Goals** Attendees will • Learn how BRIDGE-Wiz software can lead developers to devise clear and actionable statements linked to appropriate indicators of evidence quality and recommendation strength; • Learn how eGLIA software can help to identify obstacles to successful implementation. • Learn how key action statements and action statement profiles can be used to support transparency of the guideline development process and promote successful implementation.

**Target Group, Suggested Audience** Guideline developers, guideline implementers

**Description of the Workshop and of the Methods used to Facilitate Interactions** Following a brief overview of IOM standards for trustworthy guidelines and common problems in creating actionable recommendations, the facilitators will lead the “panel” through dynamic creation of a guideline recommendation using BRIDGE-Wiz. Attendees will function as a guideline development group responding to prompts from the software and interacting with the facilitators and one another. Facilitators will next provide a brief demonstration of eGLIA software appraising selected recommendations to identify implementability challenges. With audience participation, recommendations will be appraised and conflicting appraisals reconciled to create an implementability report. Finally, the construction and use of action statement profiles will be discussed. Action statement profiles summarise information about each recommendation and make explicit and transparent the process by which evidence and opinion are transformed into recommendations about appropriate care.
