

Appendix

Appendix Figure 1: Bootstrapping analytical workflow, exemplar patient race

CI = Confidence interval.

Appendix Table 1: Predictors and coefficients included in the Palliative Connect mortality prediction model

	Predictors	Coefficients
	(Intercept)	-4.09
	Age	0.70
	Female	-0.22
	Admission type urgent	1.29
<i>Comorbidities</i>	Metastatic cancer	0.23
	Alcohol use disorder	-0.08
	Weight loss	0.14
	Deficiency anemia	-0.10
	Lymphoma	0.17
	Pulmonary circulation disorders	0.06
	Obesity	-0.08
	Hypertension, uncomplicated	-0.16
	Fluid and electrolyte disorders	0.10
	Renal failure	-0.06
	Other neurologic disorders	0.06
	Peripheral vascular disorders	0.04
	Hypothyroidism	-0.04
	Congestive heart failure	0.14
	Depression	-0.07
	Drug use disorder	-0.10
	Coagulopathy	0.10
	Solid tumor without metastasis	0.32
<i>Lab values</i>	Anion gap	0.23
	Blood urea nitrogen	0.33
	Total calcium	0.44
	Carbon dioxide	0.49
	Chloride	0.23
	Creatinine	0.36
	Glucose	0.13
	Hemoglobin	0.18
	Mean cell volume	0.15
	Platelet	0.62
	Potassium	0.23
	Red cell distribution width	0.11
	Sodium	0.45
	White blood cell	0.49

* indicates that the bootstrapped 95% CI of the subgroup minus reference group difference for each metric does not include zero.

Abbreviations: FPR = false positive rate, FNR = false negative rate, ICI = integrated calibration index. Age quartiles comprised: youngest (18.1 – 47.8 years) 2nd quartile (47.8 – 60.8 years), 3rd quartile (60.8 – 71.2 years) and oldest (71.2 – ≥90 years). Zip code level median household income

quartiles comprised: lowest quartile (\$11,269 - \$33,117) 2nd quartile (\$33,117 - \$58,784) 3rd quartile (\$58,784 - \$80,363) and highest quartile (\$80,363 - \$225,598). Zip code level educational attainment (proportion of residents \geq 25 years old who completed at least a bachelor's degree, inclusive of all higher levels) quartiles comprised: lowest quartile (0% - 21.9%), 2nd quartile (21.9% - 28.6%), 3rd quartile (28.6% - 48.7%), and highest quartile (48.8% - 100%).

	2nd quartile	10,276	0.867*	(0.860, 0.874)	0.050*	(0.045, 0.056)	0.644	(0.614, 0.673)	0.101*	(0.097, 0.106)	0.797*	(0.784, 0.809)	0.026	(0.021, 0.032)
	Lowest	10,276	0.902*	(0.896, 0.908)	0.030*	(0.026, 0.033)	0.731*	(0.703, 0.758)	0.073*	(0.070, 0.077)	0.834	(0.824, 0.843)	0.011*	(0.008, 0.014)

* indicates that the bootstrapped 95% CI of the subgroup minus reference group difference for each metric does not include zero.

Abbreviations: FPR = false positive rate, FNR = false negative rate, ICI = integrated calibration index. Age quartiles comprised: youngest (18.1 – 47.8 years) 2nd quartile (47.8 – 60.8 years), 3rd quartile (60.8 – 71.2 years) and oldest (71.2 – ≥90 years). Zip code level median household income quartiles comprised: lowest quartile (\$11,269 - \$33,117) 2nd quartile (\$33,117 - \$58,784) 3rd quartile (\$58,784 - \$80,363) and highest quartile (\$80,363 - \$225,598). Zip code level educational attainment (proportion of residents ≥ 25 years old who completed at least a bachelor's degree, inclusive of all higher levels) quartiles comprised: lowest quartile (0% - 21.9%), 2nd quartile (21.9% - 28.6%), 3rd quartile (28.6% - 48.7%), and highest quartile (48.8% - 100%).

Appendix Figure 2: Original mortality risk model predictor coefficients versus the standardized mean difference in predictors, reference group minus subgroup, by age quartile

All 34 predictors included in the original EHR-based mortality risk model are represented in this plot. Variable coefficient estimates are represented on the x-axis; standardized mean difference (difference between the two group means divided by the standard deviation of the variable) is represented on the y-axis.

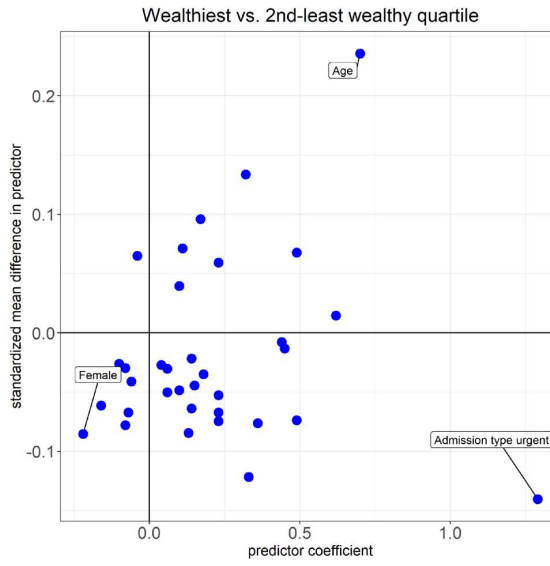

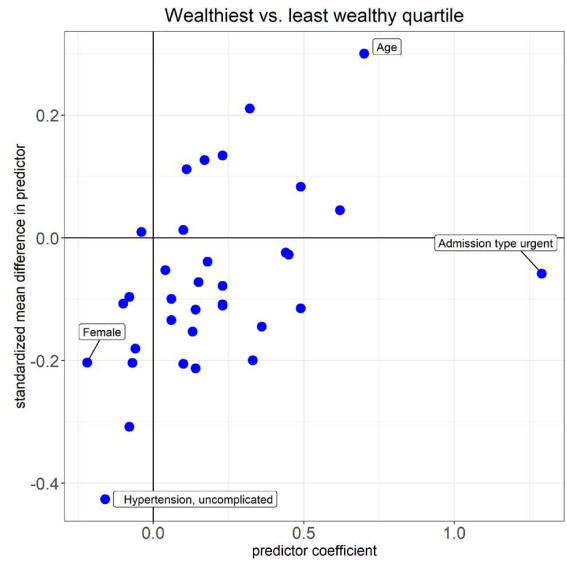

Appendix Figure 3: Original mortality risk model predictor coefficients versus the standardized mean difference in predictors, reference group minus subgroup, by ethnicity

Appendix Figure 4: Original mortality risk model predictor coefficients versus the standardized mean difference in predictors, reference group minus subgroup, by insurance status

Appendix Figure 5: Original mortality risk model predictor coefficients versus the standardized mean difference in predictors, reference group minus subgroup, by household income quartile

Appendix Figure 6: Original mortality risk model predictor coefficients versus the standardized mean difference in predictors, reference group minus subgroup, by educational attainment quartile
